Comment or Message

Dear LOCAC Board Members:

This comment is in reference to the proposed Benson MUP application being considered at tonight's meeting. About a year and a half ago, I attended the Land Use Committee meeting representing Greening Los Osos to ask the committee to consider our valuable tree population whenever permits came before LOCAC. I believe it has become part of their considerations. Our organization is in favor of well planned improvement projects in our community such as the one you are considering tonight. This project will be a great improvement to the vacant corner. Our mission is to preserve, maintain and enhance the tree population of Los Osos. And therefore, with any new project we are concerned about the preservation of our heritage trees especially in our viewshed along 2nd Street. The trees in that area are vital to our community and ask that LOCAC carefully consider the protection of our trees in this and all development projects. Our community is losing trees everyday. We are not in favor of removal of any of our heritage trees and of course always hope any new project will include plans for more native trees. Thank you for your consideration in this matter.

Sincerely,

Tony Salome

President, Greening Los Osos
